Laboratory

Technical Bulletin Number 17

Effective 4/20/00:

The following information will be included as interpretive data for HBSAB QNT.

HBsAb Quantitative Reference range:

≥ 10.0 mIU/mL : Reactive: Presence of antibody, indicative of protective immunity or previous exposure.

Borderline: Low level of antibody detected with possible recent antibody conversion, not suggestive of protective immunity. Repeat testing in 2 to 4 weeks may be helpful.

< 10.0 mIU/mL: Non reactive: No specific antibody detected.

If acute disease or early conversion is suspected, suggest repeat testing in 2 to 4 weeks.

Issued on: January 12, 2004

For question about this, and other, information, call Central Pennsylvania Laboratory at 1-888-480-1422
